IN THE CLAIMS

Please cancel claims 1-9 and amend claim 14 as follows.

- 1. (Cancelled)
- 1 2. (Cancelled)
- 3. (Cancelled)
- 4. (Cancelled)
- 1 5. (Cancelled)
- 1 6. (Cancelled)
- 7. (Cancelled)
- 8. (Cancelled)
- 9. (Cancelled)
- 1 10. (Original) A method for performing a finishing lapping process to a
- 2 magnetic head, comprising:
- dispensing lapping media onto an interface surface of a compliant pad;
- engaging the interface surface to the surface of a head outside a region comprising
- 5 magnetic transducers defining a head gap; and

- moving the pad over the head in a direction parallel to the head gap while using a 6 head rail to guide the pad. 7
- The method of claim 10 wherein the moving further comprises 11. (Original) 1 oscillating the pad linearly over the head parallel to the head gap. 2
- The method of claim 10 wherein the lapping media contains a (Original) 12. 1 combination of chemical and mechanical agents.
- The method of claim 12 wherein the chemical etchants are (Original) 13. 1 etchants specifically adjusted to give a desired head profile for the poletips and shields. 2
- (Currently Amended) The method of claim 13 wherein the etchants are 14. ı formed by adding dilute acid to the conventional lapping media used at the interface surface. 2
- The method of claim 14 wherein the added etchant selectively 15. (Original) į removes iron containing poles and shields to advance the poletips below a surrounding 2 insulator layer. 3
- The method of claim 12 wherein the magnetic head comprises 16. l (Original) a MR element and shields defining a MR read sensor, and wherein the moving of the soft,
- compliant pad causes the mechanical agents to eliminate element conducting connections and 3
- smears between the MR element and shields. 4

2

- 17. (Original) The method of claim 16 wherein the moving further comprises
- 2 moving the pad from one end of the head to another and reversing the direction without
- 3 stopping on the element.
- 1 18. (Original) The method of claim 10 wherein the soft, compliant pad
- 2 conforms to the head rail to provide a parallel movement during the moving.
- 1 19. (Original) The method of claim 10 wherein the soft, compliant pad
- 2 comprises a fabric mat.
- 1 20. (Original) The method of claim 10 wherein the fabric mat comprises a
- 2 cotton mal.
